## PRODUCTION BRIEF

With the gear transmission and low power consumption, the working life islong, while seldom breaking-down.

The spiral always turns clockwise to press the flour regiment. While the bowl's direction can be chosen clockwise or anti-clockwise according to requestment.

Making flour regiment crumple to press well. The flour tendon is rising quickly.The temperature of flour regiment is not high, low-consuming electricity.

The weight of machine is light, so the conveyance cost is low!
